

Student Performance Data using Pandas and Matplotlib

Objective:

To analyze student performance data and generate visual insights.

Tools Used:

- Python
- Pandas
- Matplotlib

Methodology:

1. Loaded CSV dataset.
2. Calculated average math score.
3. Generated Bar Chart.
4. Generated Scatter Plot.
5. Generated Heatmap.

Results:

Observations:

1. The average **Math** marks are **79.5**.
2. The **bar chart** shows Monu scored the highest in Mathematics, while Rahul scored the lowest.
3. The **scatter plot** indicates a positive relationship between Math and Science marks; students performing well in Math generally also perform well in Science

Conclusion:

The dataset was successfully analyzed using Pandas and Matplotlib.
